Shooting stars are very common

. Rock from space regularly enters the Earth's atmosphere, with around one

million shooting stars occurring every day around the world. To try to see a

shooting star, the sky should ideally be clear. The best way to see one is to

stare at one point of the sky for around 20 minutes.

So, how can you tell the difference? The general rule-of-thumb is that natural

meteor reentries happen quickly and typically last less than a few seconds while

human-made reentries happen slowly, and typically can last 20 - 90 seconds

or more.
